

### Climate Graph Directions

1. Pick two cities in the Eastern Hemisphere from different continents
2. Look up the yearly climate in these cities in a book or at [www.weatherbase.com](http://www.weatherbase.com)
3. Create a symbol for Temperature and a symbol for Precipitation
4. Map the monthly temperature and then map the monthly precipitation in each city
5. Make sure each city has a different color and make a key for your symbols.
6. On the back answer the questions in complete sentences for **one** of the cities you chose

It should look something like this:
